

Medical designed core with zonal pressure support utilising a unique material with the soft luxury feel of latex.

Moveable vasco cell structure surface to reduce pressure and to maintain healthy skin and soft tissue circulation.

Medical specification and benefits from double layer airventing for cooling and a soft zonal support surface.

The Varimatic HealthCare Mattress Range

The Varimatic HealthCare mattress range has been specifically designed to ease the suffering of people with a chronic illness and/or disability. Each one is manufactured using medical grade materials and has been based on the designs used in hospitals and medical units to help reduce pressure points, increase soft tissue circulation, reduce inflammation and aid recovery.

The luxury mattress covers have been specifically chosen to prevent heat build-up via their breathable fabric technology and mesh sides; drawing moisture away from the body and providing additional air circulation.

Zonal Support

HealthCare Mattress	Depth	Small single	Single	Small double	Double	King	King twin	Super King	Super King twin
Latent, AirSoft Health & Air25*	25cm	2'6"	3'	4'	4'6"	5'	2 x 2'6"	6'	2 x 3'
Standard Health & Air22*	20cm	2'6"	3'	4'	4'6"	5'	2 x 2'6"	6'	2 x 3'

All of our mattresses contain carefully created zonal support where the foam is more concentrated in specific areas to support your spine – ensuring it stays aligned to its natural shape. This helps to reduce pressure of the neck, shoulders, back, hips and knees, helping to improve posture, relieve aches and pains and improve comfort while you sleep.

*10 year guarantee

The mattress that breathes...

As you move, the springs pump air through the AIR FOAM matrix surface.

AIR22[®], AIR25[®]

AIR 22, AIR 25, a combination of encapsulated sides, luxurious pocket springs and the proprietary technology of our AIR FOAM creates a mattress that actually breathes, circulating air around your sleep environment. This keeps it fresh and free from allergy activators and also allows your body to be just the right temperature.

On top of this, our sleep system also offers memory foam pressure relief without the heat - optimum full body support and comfort for a great night's sleep.

CoolMax

The Coolmax is made up of two layers of foam. Top layer is 2" of Vasco, a viscoelastic foam that is temperature-sensitive and provides enhanced pressure distribution across the contact surface. The pressure distribution is optimised when used in conjunction with the bottom layer which is 6" of high load bearing Reflex foam.

This combination spreads the sleepers weight, no matter what body weight, to provide the least possible pressure.

This is then covered with the luxurious soft Coolmax zipped cover.
